                                                                                                                                                          The present sequence is the coding sequence of a synthetic HIV Gag-reverse transcriptase expression cassette, FS(-)_brotWod_RTopt_YM. The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of th HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV Gag-polypeptides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome (AIDS).

                                                              The invention relates to a nucleic acid molecule encoding a modified HIV (human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV Env. Gag, Pol or Nef) are useful for these are useful for ameliorating the symptoms of acquired immunodeficiency syndrome (AIDS) or HIV infection and generating an antibody or cytotoxic T lymphocyte (CTL) response against native HIV Env. Gag, Pol or Nef. Furthermore, the nucleic acids, proteins and subsequent compositions are useful for treating or preventing HIV infections or AIDS. Sequences ARK91449-ABK91634 represent modified HIV protein-encoding plasmid DNA sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3319

Expression cassettes encoding the human immunodeficiency virus (HIV) Gag-containing polypeptide useful for vaccinating against HIV infections and acquired immunodeficiency syndrome (AIDS) -

Claim 7; Fig 75; 391pp; English.

us-09-610-313-32.rng

The present sequence is the coding sequence of a synthetic HIV
dega-reverse transcriptase expression cassette, FS(-)_protMod_RTopt(+).
The Gag protein of HIV is needed for the assembly of virus-like particles. In addition, the Gag protein is involved in many stages of the HIV life cycle, including assembly, virion maturation after particle release and early post-entry steps in viral replication. The expression cassette may be used for the recombinant expression of HIV dega-polypetides which may then be used to vaccinate against HIV infection and acquired immunodeficiency syndrome (AIDS)

```
The invention relates to a nucleic acid molecule encoding a modified HIV (human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV Env. Gag. Pol or Nef) are useful for genetic or protein immunisation to a host, respectively. In particular these are useful for ameliorating the symptoms of acquired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HIV; human immunodeficiency virus; gene; ds; circular; cyclic; anti-HIV; Env; Gag; Pol; Nef; genetic immunisation; protein immunisation; AIDS; acquired immunodeficiency syndrome; cytotoxic T lymphocyte; CTL.

The invention relates to a nucleic acid molecule encoding a modified HIV (human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV Env, Gag, Pol or Nef) are useful for genetic or protein immunisation to a host, respectively. In particular these are useful for ameliorating the symptoms of acquired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             HIV; human immunodeficiency virus; gene; ds; circular; cyclic; anti-HIV; Env; Gag; Pol; Nef; genetic immunisation; protein immunisation; AIDS; acquired immunodeficiency syndrome; cytotoxic I lymphocyte; CTL.

immunodeficiency syndrome (AIDS) or HIV infection and generating an antibody or cytotoxic T lymphocyte (CTL) response against native HIV Env. Gag, Pol or Nef. Furthermore, the nucleic acids, proteins and subsequent compositions are useful for treating or preventing HIV infections or AIDS. Sequences ABK91449-ABK91624 represent modified HIV protein-encoding DNA sequences of the invention. plasmid

```
The invention relates to a nucleic acid molecule encoding a modified HIV (human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV Env. Gay. Pol or Nef) are useful for genetic or protein immunisation to a host, respectively. In particular these are useful for ameliorating the symptoms of acquired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    HIV; human immunodeficiency virus; gene; ds; circular; cyclic; anti-HIV; Env; Gag; Pol; Nef; genetic immunisation; protein immunisation; AIDS; acquired immunodeficiency syndrome; cytotoxic I lymphocyte; CTL.

The invention relates to a nucleic acid molecule encoding a modified HIV (human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV BIV, cay, Pol or Nef) are useful for genetic or protein immunisation to a host, respectively. In particular these are useful for ameliorating the symptoms of acquired

```

immunodeficiency syndrome (AIDS) or HIV infection and generating an antibody or cytotoxic T lymphocyte (CTL) response against native HIV Env. Gag, Pol or Nef. Furthermore, the nucleic acids, proteins and subsequent compositions are useful for treating or preventing HIV infections or AIDS. Sequences ABK91449-ABK91624 represent modified HIV protein-encoding plasmid DNA sequences of the invention.

```
The invention relates to a nucleic acid molecule encoding a modified HIV (human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV Env. Gay. Pol or Nef) are useful for genetic or protein immunisation to a host, respectively. In particular these are useful for ameliorating the symptoms of acquired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      HIV; human immunodeficiency virus; gene; ds; circular; cyclic; anti-HIV; Env; Gag; Pol; Nef; genetic immunisation; protein immunisation; AIDS; acquired immunodeficiency syndrome; cytotoxic T lymphocyte; CTL.

The invention relates to a nucleic acid molecule encoding a modified HIV (human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV Env. Gag, Pol or Nef) are useful for genetic or protein immunisation to a host, respectively. In particular these are useful for ameliorating the symptoms of acquired

| immunodeficiency syndrome (AIDS) or HIV infection and generating an antibody or cytotoxic T lymphocyte (CTL) response against native HI Gag, Pol or Nef. Furthermore, the nucleic acids, proteins and subse compositions are useful for treating or preventing HIV infections o AIDS. Sequences ABK91449-ABK91624 represent modified HIV protein-en plasmid DNA sequences of the invention. Sequence 9785 BP, 2360 A, 2843 C, 2731 G, 1851 T; 0 other; | Match 80.2%; Score 1970; DB 24; Length 9785; Local Similarity 90.9%; Pred. ```

```
The invention relates to a nucleic acid molecule encoding a modified HIV (human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV Env. Gay. Pol or Nef) are useful for genetic or protein immunisation to a host, respectively. In particular these are useful for ameliorating the symptoms of acquired
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  HIV; human immunodeficiency virus; gene; ds; circular; cyclic; anti-HIV; Env; Gag; Pol; Nef; genetic immunisation; protein immunisation; AIDS; acquired immunodeficiency syndrome; cytotoxic I lymphocyte; CIL.

```
The invention relates to a nucleic acid molecule encoding a modified HIV (human immunodeficiency virus) protein. The nucleic acid molecule and its encoded protein (modified HIV Env, Gag, Pol or Nef) are useful for genetic or protein immunisation to a host, respectively. In particular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        HIV; human immunodeficiency virus; gene; ds; circular; cyclic; anti-HIV; Env; Gag; Pol; Nef; genetic immunisation; protein immunisation; AIDS; acquired immunodeficiency syndrome; cytotoxic T lymphocyte; CTL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2266
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2326

Davies and Jeffrey McDermott, combines CDNAs from Cc-1690 cells grown to mid-log phase in TAP (NH4+ - containing) and shifted to TAP - NO3- (24hrs); H2 production conditions (0, 12hr, 24hr) see Melis et al.,(2000) Plant Phys. 122: 127-135; TAP + H202 (1, 12, 24 hr); TAP + sorbitol (1, 2, 6, 24 hr); TAP + H202 (1, 12, 5, 24 hr). PolyA mRNA was purified from each sample, pooled and cDNA synthesized. The cDNA was directionally cloned into lambda SAP II (Stratagene) in the EcoRI (5') and XhoRI (3') sites. PBluescript II SK- plasmids were excised from the lambda ZAP clones by superinfection with ExAssist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al., (1996) Genome Research 6: 791-806.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         BM321023 862 bp mRNA linear EST 03-JAN-2002 rockefeller.0.594 Mastigamoeba balamuthi lambda ZAP II Library Mastigamoeba balamuthi cDNA similar to adenosylhomocysteinase (EC

Plants were grown in the greenhouse at the University of
Callifornia, Riverside (Fenton, 53 Close, TJ Close). Whole
Spikes with awns trimmed were collected at 5, 10, 15, 20,
30 and 45 DAP (Fenton). Total RNA was prepared from each
pool, equal quantities of all six RNA pools were combined,
poly(A) RNA was purified from the mixture, one primary
unamplified cDNA library was made, and 1 million pfu were
in vivo excised to give pbluescript SK(-) cDNA phagemids
(Choi)in the TJ Close lab at the University of California,
Riverside. Phagemids were plated and picked at the Clemson
University Genomics Institute (CUGI) (Begum, Palmer,
Frisch, Atkins and Wing). Plasmid DNA preparations, DNA
sequencing and sequence analysis were performed at CUGI
(Wing, Yu, Frisch, Henry, Simmons, Oates, Rambo, Main).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        BE601575 640 bp mRNA linear EST 22-OCT-2001
